## Firmware Upgrade Log

V1.4.12    2023.6.12

### [Optimizations]

1. Fixed an issue that the effect level cannot be reset when the joystick is set to sound control.
2. Fixed an issue that performance memory data may be damaged and its button LED will not light up in some cases.
3. Fixed an issue that sometimes the content inside the Expansion folder is not displayed after installing the expansion pack.
4. Shortened the display time of some temporary pop-up windows.
5. Fixed an issue that the channel volume might be wrong when audition in style editing after it is adjusted.
6. Fixed an issue that Q.S. volume cannot be saved in style editing.
7. Fixed an issue that operating the Dial may incorrectly change the percussion channel sound in style editing.
8. Fixed an issue that the keyboard octave setting is automatically restored after stopping style recording.
9. Fixed an issue that an exceeding section length may appear when doing Copy From in style editing.
10. Fixed an issue that when recalling memory saved by early firmware, the down function of the joystick may become microphone volume.
11. Fixed the pitch error of MIDI IN chord.
12. Fixed an error that may occur when playing styles with mono and portamento.
13. Fixed an issue that sometimes the arpeggiator fails to handle the Latch parameter correctly.
14. Fixed an issue that some pop-up menus in some interfaces cannot disappear after clicking on blank space.
15. Other optimizations and fixes for known issues.

## [New Features]

1. Implemented the function of user data backup and restore. (Backup user files and settings, no expansion contents.)
2. Added the support for new expansion pack contents, including Performance Memories, Phrase Pads, Arpeggio patterns, Albums, etc. (It requires expansion packs generated by GrandSuite V2.4 or above.)
3. Added the function to export user Albums to the USB flash drives and import from USB flash drives.
4. Added the function to delete all controllers or all notes in the Style Edit event list.
5. Added the function to quickly select and delete the same pitch notes in the Style Edit event list by using the keyboard.
6. Added the function to quickly enter the Q.S. parameter setting of Style Edit by pressing the [Store] + [1~4] buttons when the panel [Q.S.] is turned on.
7. Added the function to display and change the channels sounds in Song Edit.
8. Added two new sets of color themes, improved high contrast color theme.
9. The Bluetooth audio volume, USB audio volume and Aux in volume in Mixer setting will now be saved when turning the power off.
10. Added the option to set the Style or Song playback respond to Scale Tuning in the Style and Song settings menu.
11. The sync status of Phrase Pad can now be stored in Performance Memories.
12. Added the function to turn pages by data dial when browsing user files or USB flash drive files.

## [Optimizations]

1. Improved channel quantization function for Style, Song, and Phrase Pad Edit.
2. Expanded the upper pitch range of notes in the Style Edit event list to G9.
3. Added pitch bend sensitivity event in Style Edit event list.
4. The Phrase Pad now can start and stop in sync with Style when it is in the sync state.
5. Improved tempo following response latency when received MIDI clock from MIDI in.
6. Now when returning from the Q.S. mode to Performance Memory mode, the panel [Lock] status will be restored.
7. Other various improvements and bug fixes.

## V1.3.7 2022.4.21

### [New Features]

1. Added portamento time Fixed mode in Sound Edit.
2. Enabled Sound Edit for expansion sounds.
3. The function selections of the pedals will be saved when power off.
4. The Octave settings of R1, R2 and R3 now can be changed simultaneously by using [Short Cut +] and Octave buttons.
5. Added Keyboard/Style volume balance option in [Controller] – [Knob] – [Master].
6. A new Style Edit function: opened all channel mapping and chord options, and most of the parameters can be changed while auditioning during playback, etc.

### [Optimizations]

1. Fixed an issue that sometimes the tempo setting from MIDI IN was less by 1 BPM.
2. Fixed an issue that the style playback speed was sometimes affected by USB stick access.
3. Improved USB Audio compatibility with some Android systems.
4. MIDI IN notes to keyboard parts can now be controlled by panel Part ON/OFF buttons, and Octave, Transpose settings.
5. MIDI IN notes to chord part can now be controlled by panel Chord ON/OFF button.
6. Improved the switching rules for half bar fill in playback.
7. Fixed an issue that the style of a merged expansion pack sometimes cannot be called from Album.
8. Enlarged the touch response area of the track names in Mixer.
9. Other various improvements and bug fixes.

## V1.2.7 2021.9.1

### [Optimizations]

1. Improved compatibility for accessing USB sticks.
2. Solved an issue that caused occasional boot crashes.
3. Various bug fixes and improvements.
