Firmware Update Operation Instructions

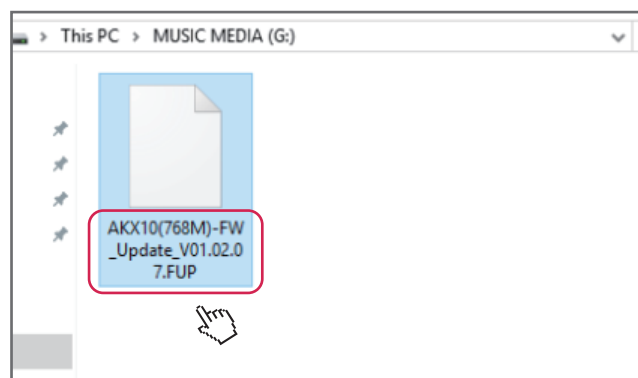

2021 / 8 / 4

Attention! Please make sure to strictly follow the instructions below. DO NOT disconnect the power or unplug the USB flash drive during the update, otherwise the product may be damaged!

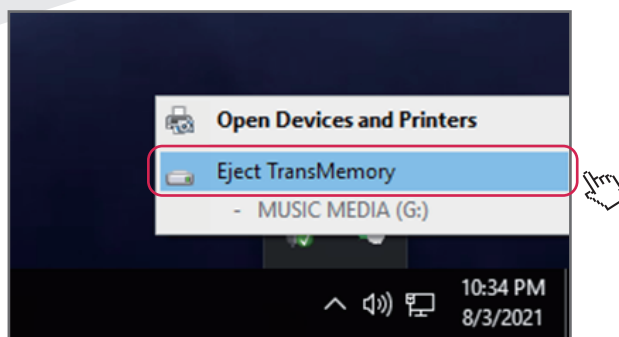

1. Download the firmware update package and unzip it.

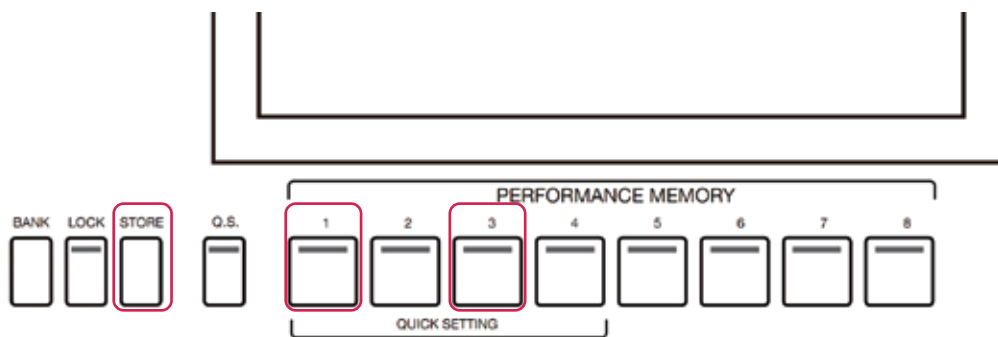

2. Copy the update file with the suffix name '.FUP' to the root directory of the USB drive. The USB flash drive requires FAT32 format, and only one update file can be kept in the root directory (.FUP).

3. Attention! The USB flash drive must be safely ejected before you unplug it, otherwise the update may fail.

4. Turn the instrument off, press and hold the 'STORE' + 'M1' + 'M3' buttons on the panel simultaneously, and then press the 'POWER' button to turn on the instrument.

5. After the update interface is displayed, you can release the buttons.

6. Insert the USB flash drive with the updated files (.FUP), wait until the system has detected the update file, and then complete the update according to the interface prompts.
